

NOORD.

The city's numbers, set on a Swiss grid
and printed in two inks.

Brussels, in numbers. Then in ink.

NOORD turns the city's open data — rain, sunshine, bike counters, air quality, trees, transit stops — into A3 posters. Each poster sits on a 6×8 grid, uses two inks on a paper tone, and is ready to print or to frame. You choose the data and the grid; the seed decides the rest.

YOUR FIRST POSTER

FOUR STEPS

01

Pick the data

Open **Data** and choose a dataset. The poster redraws at once, with the grid that suits it best.

02

Try another grid

Grid changes the drawing: matrix, rings, ridge lines, spiral... Every grid works with every dataset.

03

Dress it

Colors sets the paper and the two inks, **Type** the font pair. **Tints** and **Contrast** tune how the values read.

04

Roll and export

Press **Reroll** — or **R** — until it clicks, then **Export SVG** or **Export PNG**.

NINE GRIDS

SAME DATA • WEATHER

Modular matrix • Field (hour $\times$ day) • Polar rings • Recursive split • Isometric • Bands (ridge lines) • Dot matrix • Spiral split • Broken grid.

THE LINK IS THE POSTER

Every setting is written into the page address as you go. Copy the URL and you can reopen, share or bookmark that exact poster — data, grid, colours, seed and all.

Eighteen datasets.

TIME	CHARTS	MAPS	DOT GRIDS
Weather: rain and heat	Open-Meteo	Map: shops	
Weather: sunshine	Open-Meteo	Map: transit stops	
Bikes: a week by the hour	Brussels Mobility	Map: EV charging	
Overlay: rain × bikes	Open-Meteo + counters	Map: cycle lanes	
Air: NO2 by station	IRCELINE	Map: street trees	
Air: ozone	IRCELINE		
Air: fine particles PM2.5	IRCELINE		
People: age by year, 1992–2025	Statbel		
Cycle lanes: built per year	Bruxelles Mobilité		
Permits: building applications	Brussels Region		
Trees: species by district	City of Brussels		
Villo: bike docks	snapshot		
Visitors: brussels.be by country	City of Brussels		

The maps redraw the city as a field of dots: where things are dense, the ink is too.

SETTINGS	
COLORS	Fifteen paper-and-two-ink palettes, or Custom : pick paper, ink 1 and ink 2 yourself. On light papers the two inks overprint, as on a real press.
TYPE	Ten display + mono font pairs, embedded in the export.
TINTS	Smooth for continuous shades, or 5 / 3 screens for flat steps, like a screen print.
TEXT	Minimal (title and key figure), None (art only) or Full (axes and legend).
CONTRAST	Stretches or flattens the values, from 40 to 260 %.
SEED	A number from 1 to 99 999. Same seed, same poster.

OPTIONS	
ROTATE AXES	Swaps rows and columns of the data.
FUSE CELLS	Closes the gaps: the cells touch.
TYPE AS DATA	Row labels grow with their values.
PAGE GRID	Shows the 6 × 8 grid the poster is built on.

Ready for the press.

EXPORT

SVG	A3 at true size, 297 × 420 mm, fully vector. Open it in Illustrator, InDesign or Figma and keep editing.
PNG	300 dpi for print (3508 × 4961 px) or 150 dpi for screens and sharing. On a phone, 150 dpi is chosen for you.
BLEED	Tick Bleed 3 mm + crop marks before exporting a file for a printer.
FILE NAME	Each file is named after its data, grid and seed — noord-weather-rings-7 — so you always know how to remake it.

MOVING AROUND

ZOOM	Trackpad or wheel, pinch, double-click, or the    keys. Fit brings the whole poster back.
PAN	Drag the poster.
REROLL	 , the Reroll button, or the round ↺ button on a phone.

MAKE IT YOURS

INTERFACE	Eight themes for the app itself — Paper, Night, Klein blue, Acid, Blush, Terminal, Concrete, Tomato — or Auto, which follows your system.
LOGO	Click the NOORD logo to cycle through its typefaces. Both choices stay in this browser.

PRINTING TIPS

Ask for an uncoated paper, 120 g or heavier: the overprinted inks look closest to a real two-colour print. Export with bleed and crop marks, and leave the 300 dpi PNG or the SVG as is — both are already at A3.
